

INTRODUCING

SCALEN 2700T 12.2M

WHEN SIZE DOES MATTER

RPG AUSTRALIA
INTEGRATED STEEL SOLUTIONS

Scalen 2700T 12.2M

RPG Australia has long been recognised as the industry leader in steel processing. To maintain this position, it is vital that we stay in touch with market and equipment developments, and work with our customers in finding ways to reduce costs, to enable us all to be competitive against market conditions and imports.

Longer length capability, higher tonnage & greater flexibility

Our latest addition is the Scalen 12.2 metre x 2700 tonne Tandem Brake Press. The advantages of such a press to our customers will be a reduction in welding costs caused by longer length capability and also the higher tonnage will reduce expensive joins in such fabricated items as mining buckets, compactor bins, sheet piling, truck chassis rails, commercial box guttering and numerous engineered products which are designed based on existing capacity.

New options in design

Traditionally tandem machines were restricted by the depth of the throat on the machines, however with clever engineering design by Scalen this has been overcome and our latest addition has a throat capacity of 1250mm which broadens the horizons of capability with such a machine.

RPG Australia would welcome the opportunity to discuss your existing requirements, and further more, collaborating with your design teams to minimise your costs by utilising the added length and tonnage capacity in brake pressing, alongside our existing profiling, plate rolling and section curving capabilities.

Specifications

- 12.2 metre overall length
- 2700 tonnes pressing force
- 1250mm throat
- Latest Dalem CNC Controller

Proud member of the Southern Steel Group
